INTRODUCTION

Problem: - Pizza restaurant has recently seen a decline in sales and plans to increase them by looking at customer and order data. To do this, the management plans to perform a thorough analysis of order data and consumer behaviour in order to spot important trends and areas for improvement.

Background: - An overview of pizza sales data from January 2015 to December 2015 is given in this report. To find trends and patterns in pizza sales, data was gathered from pizza joints across the United States and analysed.

GOALS & KPI'S

Goals

- Increase pizza sales by 10% within 6 months
- Identify and address the root cause of the decline in sales
- Improve customer satisfaction and loyalty
- Gain a deeper understanding of customer behaviour and preferences

Key Performance Indicators (KPIs)

- Total pizza sales revenue
- Number of pizzas sold
- Average order value

\$8,01,944.70

Can we identify any seasonality in the sales?

Spring & Summer season has the highest sales as compared to other two seasons.

➤ ARE THERE ANY PIZZAS WE SHOULD TAKE OFF THE MENU, OR ANY PROMOTIONS WE COULD LEVERAGE?

- We can take off the pizza from the menu is : the_greek_xxl reason is simple it is lowest ordered pizza in that year and Since the Spring & Summer season already saw the largest pizza sales and the Fall season saw the lowest pizza sales, so we can provide a seasonal discount or special offers according to season.

CONCLUSION

The given dataset is a useful tool for examining the year's worth of sales at a fictitious pizza restaurant. It can be used to investigate a number of suggested analysis inquiries about pizza orders and sales.

Depending on the precise issues and objectives of the analysis, Excel or other data analysis tools and techniques may be used.

The dataset provides a thorough overview of the sales and ordering trends for pizza, which may be utilised to develop insights and make sensible decisions.
